Import data from websites and webpages, and send this data directly to your drawing. You can create and insert hyperlinks and even add images to this imported data. (video: 1:15 min.) Create and manage your document with relevant previews and highlighting. Provide more context by viewing information about the elements in your drawings, including images, layers, filters, cross-hairs, and colors. (video: 1:15 min.) GUIDELINES import your favorite website as a style: Copy URL, paste into right-click menu, then select Import From Web Style. You can now easily create data-based styles. These styles can be used in traditional ways, including parameterized dimensions and quantities. Import a web page to a drawing, with all associated information, including links and images. Design your models with cross-hairs on visible parts of the design that can be edited. Quickly select an object or area within the drawing and change it. (video: 1:15 min.) Leverage the simplicity and robustness of the Windows file system to organize your drawing file into subdirectories by layout and component. This can be very helpful when you have a large number of drawings, or just when you work in a large organization. Add one or more new drawings and see all of your other drawings at a glance in the My Documents window. Increase or decrease your paper size, and see the effect immediately. The size of your paper is directly reflected in all drawing commands. The image viewer automatically changes to the paper size you have selected. (video: 2:45 min.) Create a print-ready PDF with all the details of your drawing. Your PDF will also include all the colors in your drawing, layers, annotation, and any imported styles. A Mac-only feature, Bring to Front and Send to Back allow you to effortlessly bring and send layers, cross-hairs, colors, styles, objects, filters, and any other drawing element to the top or bottom of the drawing list. Add perspective view drawing to your model, without having to create a separate view. Add and edit commands for switching views in other modes, such as the Plan, Section, and 3D views. The default command to create sections and lines is more flexible: you can add a variable dimension, snap to a point or edge, and even add a fixed dimension.
